

Adriano Vilarinho Ribeiro

SOFTWARE ENGINEER · DEVOPS

✉ adrianoribeiro2554@gmail.com · linkedin.com/in/adrianoribeiro-informatic · github.com/stkzin · 📍 Porto, Portugal

PROFILE

Final-year Computer Engineering student at UTAD, with one course remaining, with a strong interest in Software Engineering and DevOps. I enjoy working across the full stack, from backend systems and databases to deployment and infrastructure.

My final-year project, **SmartBikeRoutes**, combined real OpenStreetMap routing, weather conditions and geospatial data into a full-stack application for cyclists. I'm also building **PitWall**, an F1 race strategy simulator using real telemetry data, FastAPI, PostgreSQL, Docker, CI/CD and Kubernetes.

Alongside this, I've been deepening my Linux knowledge through pwn.college and expanding my understanding of advanced DevOps practices, including monitoring, logging, scalability and Kubernetes.

Alongside my technical background, I have gained professional experience as a Sales Specialist at Endesa, managing the full customer acquisition process from prospecting to negotiation. This experience strengthened my communication, negotiation, resilience, and problem-solving skills while balancing professional responsibilities with my Computer Engineering degree.

JOURNEY

- 2022

Started BSc in Computer Engineering
UTAD, University of Trás-os-Montes and Alto Douro · Vila Real, Portugal
- 2023 – PRESENT

Sales Specialist
Endesa · Part-time · Porto, Portugal
Managed the full customer acquisition cycle, from prospecting to negotiation, while balancing a full academic workload throughout the degree.
- 2026

Final year, one course remaining
Final project: SmartBikeRoutes – geospatial routing with React Native, FastAPI, PostGIS
- NOW

Building PitWall
F1 race strategy simulator · also my hands-on introduction to DevOps (Docker, CI/CD & Kubernetes)

SELECTED PROJECTS

PitWall

CURRENTLY BUILDING

Docker GitHub Actions CD Kubernetes FastAPI PostgreSQL

- Reconstructs real F1 races from telemetry, simulates alternative pit strategies
- 91 automated tests, 99% coverage, live in production with CI/CD on every push

SmartBikeRoutes

React Native FastAPI PostGIS pgRouting

- Cycling routes weighted by gradient, live weather, and rider profile, not just distance
- Full social platform: feed, likes, follows, notifications, GPX export

Urban Monitoring System

C# Sockets ASP.NET TCP/IP

- Distributed sensor network with a custom TCP protocol: ACKs, heartbeat, auto failure detection
- Real-time web dashboard showing every node's status

GestoDocente

C# / WPF MVVM

- Academic staff management app with a clean MVVM architecture
- Two-way data binding, dependency injection, fully decoupled layers

Bomberman3D

Three.js WebGL

- 3D Bomberman in the browser, no game engine — custom collisions and split-screen

TECHNICAL STACK

- TypeScript Python C# SQL
- React Native FastAPI .NET / WPF
- Three.js PostgreSQL PostGIS
- Docker Kubernetes
- GitHub Actions Git REST API
- JWT

LANGUAGES

- Portuguese Native
- English B2
- Spanish A2

SOFT SKILLS

- Customer Communication
- Problem Solving
- Teamwork
- Self-Motivation
- Quick Learner

CAREER FOCUS

- DevOps
- Actively building skills toward a professional career in DevOps.
